

Robocall Mitigation Plan – Updated February 23, 2026

LINKGLOB LLC (the “Provider”) is a voice service provider that originates voice traffic to the public switched telephone network (PSTN) and maintains a robocall mitigation program consistent with 47 CFR § 64.6305, including STIR/SHAKEN caller ID authentication implemented pursuant to 47 CFR § 64.6301, and may update its filing and associated plan information within 10 business days when filing information changes.

We perform the following roles in the call chain:

- A voice service provider with a STIR/SHAKEN implementation obligation serving end-users

LINKGLOB has not been prohibited from filing a certification in the Robocall Mitigation Database.

LINKGLOB does not have a history of enforcement actions for illegal robocalls, TCPA or TSR violations, or related state law violations.

LINKGLOB uses the following affirmative, effective measures to prevent the origination or transit of illegal robocalls.

Know Your Customer

We follow the caller ID authentication best practices for vetting caller identity and operational legitimacy for new and existing customers as described by the NANC Call Authentication Trust Anchor Working Group.

This process includes the collection and review of entity-identifying information to confirm that we have an authenticated relationship with the customer. We use this authenticated information to determine whether the customer is subject to any enforcement actions that restrict the type of calling that they may make, for example, if they have been banned from initiating telemarketing calls.

We also validate, when possible, that the entity has a legitimate right to use its asserted calling numbers. We use this information to support the attestation level we assign to calls that we originate for that customer.

Our contractual provisions with customers prohibit them from initiating illegal robocalls. If we find a customer initiating suspicious robocalls, we warn them to stop. If such traffic continues, then we terminate their service.

Know Your Upstream Provider

We do not accept traffic from upstream providers, resellers or partners. We only carry traffic associated with our own end-user customers.

Traffic Monitoring and Analytics

We use call analytics software provided by TransNexus to monitor all outbound voice traffic in real-time to prevent the origination or transit of illegal robocalls.

The software provides detailed reporting to identify suspected illegal robocalls. The system alerts us if we process outbound calls where the calling number has a poor reputation or is invalid, unallocated, or on a Do Not Originate list.

We perform the same mitigation steps for all outbound calls regardless of our role in the call chain for a particular call.

We immediately investigate any identified suspicious calls to determine if the caller or upstream provider was attempting to originate or transit unlawful robocalls. If we determine that the traffic was likely unlawful, then we warn them to stop sending such traffic. If they continue to send traffic that appears to be unlawful, then we terminate their service.

STIR/SHAKEN

We have registered with the STI-PA using OCN **231L**. We have our own STIR/SHAKEN certificate issued by the TransNexus Certification Authority (STI-CA) that we use when authenticating calls we originate. We have implemented a STIR/SHAKEN solution supplied by TransNexus.

Traceback

We respond within 24 hours to all traceback requests from the Commission, law enforcement, and the registered traceback consortium. We cooperate fully with such entities in investigating and stopping any illegal robocallers that use our service to originate, carry, or process illegal robocalls.
