

CONEXIZ Corporation
Robocall Mitigation Plan

Introduction

This document details the reasonable steps and actions taken by CONEXIZ Corporation (“CONEXIZ”) to mitigate and eliminate illegal robocalling. CONEXIZ has an ongoing commitment to scan for and help alleviate illegal robocalling by pre-qualifying prospective customers, monitoring existing customers for traffic patterns indicative of prohibited robocalls, and working with other providers and regulatory agencies in combatting fraudulent voice activity.

CONEXIZ provides resold Voice over Internet Protocol (“VoIP”) calling services. All telecom services are provided on a resale-only basis. As a telecom reseller, CONEXIZ is dependent on our underlying provider’s assistance with monitoring their networks for fraudulent voice calling patterns. Our underlying VoIP providers are Verizon and Microsoft.

Know Your Underlying Provider

CONEXIZ has a master service agreement with Verizon and Microsoft and has received written assurances from their officials that it has and will continue to sign calls submitted to CONEXIZ and will abide by the FCC’s STIR/SHAKEN and robocall mitigation rules in all respects when providing voice services to CONEXIZ. CONEXIZ and its upstream providers have agreed to work together diligently to mitigate all illegal robocalls, including cooperating fully when receiving traceback requests.

Know Your Customer

Screening interviews are performed to understand potential customer business models and the potential, or lack thereof, for involvement in fraudulent robocalling schemes. We have a direct business to business relationship with our end customer including site visits, contact relationships and regular customer service visits that build a one-on-one personal relationship.

In our research of the prospect, CONEXIZ will not activate clients that provide anonymous information or where data mismatches are found. Additionally, prospects are required to agree to CONEXIZ’s strict policies and contractual terms prohibiting the act of fraudulent voice activity as a condition of doing business with CONEXIZ.

Individuals associated with prospects or current customers who have been known to act improperly or otherwise be involved in fraudulent robocalling will cause their companies to be rejected by CONEXIZ as a customer and any existing customer relationships could potentially be severed.

Traceback Requests

CONEXIZ is committed and will respond fully within 24 hours to all Traceback Requests from the FCC, law enforcement agencies, and the industry traceback consortium and vows to cooperate with these agencies in investigating and stopping any illegal robocallers that use our service to make calls. CONEXIZ will devote sufficient resources to provide prompt and complete information to traceback requests. Our point of contact to handle all traceback requests is:

Mike Wilson
President/CEO
678-323-5002
mwilson@connexia.com

As a Verizon / Microsoft reseller, upon notification of a Traceback request, we will call these vendors to aid in this process.

If a traceback exposes an existing customer as the source of fraudulent robocalls, or as having transmitted fraudulent robocalls, a demand for an explanation and verification of mitigation of the traffic is issued to the customer. If the fraudulent traffic is not remediated, CONEXIZ immediately begins rejecting all traffic from the offending customer.

Telephone Numbers

A Telephone Number ("TN") based caller identity is the originating phone number included in call signaling used to identify the caller for screening purposes that is uniquely associated with the subscriber. A subscriber is permitted to use a TN as a caller identity if a TN is directly managed by CONEXIZ and/or obtained by CONEXIZ from CONEXIZ's underlying carriers for use by the subscriber. Numbers can also be allocated by CONEXIZ or ported using information from previous bill matching customer information.

For subscribers with multi-line telephone systems, CONEXIZ and our underlying providers only allow calls to be connected if the originating number matches one of the TN's assigned to the subscriber. This screening capability enables an automated and secure method of validating originating telephone numbers. Since we are a Verizon / Microsoft reseller, we have no way to spoof a number. Outbound calls are only allowed from a number provisioned by the wholesale provider. Spoof numbers from our end customer's equipment are denied by our upstream partners.

International Calling

CONEXIZ is not currently an international voice services provider. If at any time CONEXIZ does decide to sell our services to international customers using North American Numbering Plan

resources, we will familiarize ourselves with and develop best practices for full vetting of such customers and work with our underlying providers to perform the necessary telephone number validation on all international originated calls.

Call Analytics

As a reseller, CONEXIZ must rely on our underlying providers and/or their third-party vendors to determine if originating calls should be blocked based on call analytics practices.

Ongoing Robocall Mitigation

CONEXIZ and our underlying providers monitor and examine call detail records (CDRs) on a repeating basis to detect suspicious call activity and/or calling patterns. When we and/or our underlying providers detect network usage patterns consistent with illegal robocalls or suspect illegal robocalling is taking place, we will immediately seek to identify the party that is originating, terminating, or routing these calls so that we may take appropriate action. The actions taken may include, but are not limited to initiating a traceback investigation; verifying that the originating customer owns or is authorized to use the Caller ID number; determining whether the Caller ID name sent to a receiving party matches the customer's corporate and/or d/b/a name; block the party's ability to originate, terminate, or route calls on the network; and/or providing notice to law enforcement authorities.

As part of our Plan to mitigate and prevent any originating robocalls, we are committed to early identification and investigation of possible robocalling conditions. Among other things, we watch for higher than normal subscriber traffic volume, including large bursts of traffic in small timeframes or spikes in usage. We also monitor for originating calls of short duration and low call completion percentages, originating calls with sequential called to number dialing patterns. Our end customer agreement does allow us to suspend service for customers shown to be generating illegal calls.
