Robocall Mitigation Certification

S-NET Communications Inc. (S-NET) has fully implemented the STIR/SHAKEN authentication framework across its entire network, and all calls it originates are compliant with § 64.6301(a)(1) and (2);

S-Net Utilizes Neustar/TransUnion for its STI-AS and STI-VS services

S-NET has implemented a robocall mitigation program by sending valid CallerID in the SIP From Header and/or the P-Asserted Identity header of every SIP INVITE message that originates from its network. S-NET is in full control of all CallerID assignments and does not allow a call to originate without a valid CallerID. These messages are sent to S-NET's upstream trunk carriers:

Telnyx, LLC

Bandwidth Inc.

Inteliquent Inc.

VoIP Innovations Inc.

S-NET also utilizes Neustar's/TransUnion robocall mitigation services. This service scans all TNs coming in, labels them appropriately, and blocks the ones that have a known history of fraudulent activity.

S-NET is committed to cooperating with all traceback requests from the Commission and law enforcement agencies. S-NET will respond fully and in a timely manner to fulfill these requests and cooperate with such entities in investigating and stopping any illegal robocalls.

S-NET has not at any time in the last 2 or more years been the subject of any action or investigation by the commission, law enforcement, or regulatory agency for any wrongdoing.
