

Specific steps taken by Beltelecom to avoid originating illegal robocall traffic

According to the Head of the Traffic Analysis and Control Sector of Beltelecom (Pavel Davidovich) to counteract fraud on telecommunications networks Beltelecom uses the hardware and software system "Fraud Management System for Telecommunication Networks" developed by Amdocs Ltd. (Israel).

Subscribers on Beltelecom's network are identified and Beltelecom maintains and transmits the original CLI information from its own network, as well as from other connected networks, if such information is obtained from these networks.
