

Proactive Network Monitoring

Telenor has various monitoring and reporting systems in place to analyze traffic on its network for potentially suspicious traffic patterns that are likely to be associated with illegal robocalls or other potentially unlawful usage. If Telenor detects a pattern consistent with illegal robocalls or has reason to suspect illegal robocalling or spoofing is occurring on its network, Telenor will proactively block any further traffic from the sending party on an appropriate level towards the NANP and report the issue both with the Originating and terminating party.
