

Robocall Mitigation Plan

1. U Communications has completed a robocall mitigation solution with the use of an analytics company that is utilized by our three upstream carriers to identify and block calls with invalid Caller ID, or Caller IDs that are suspected of illegal, fraudulent, or abusive habits.
2. U Communications has currently completed full SHAKEN implementation using Level 3, VOIP Innovations, and Thinq as our upstream carriers to the best of our knowledge.
3. U Communications will respond to any traceback requests from the traceback Consortium within 1 business day and will comply with those requests within a reasonable time frame.
