WC Docket No. 17-97

**CERTIFICATE OF COMPLIANCE AND REVISED ROBOCALL MITIGATION PLAN
FOR GOCO TECHNOLOGY (U.S.) INC.**

GoCo Technology (U.S.) Inc., (“GoCo US” or “Company”)¹, respectfully submits this revised Robocall Mitigation Plan (“Plan”) to the Federal Communications Commission (“FCC” or “Commission”) as required under 47 C.F.R. § 64.6305(d). GoCo US’s initial Plan was submitted on June 28, 2021, when it registered with the Commission’s Robocall Mitigation Database.² A revised Plan was filed on June 12, 2023. In response to additional requirements as laid out in DA 24-73 RMD Public Notice, GoCo US filed a revised Plan on September 12, 2025 to comply with the Sixth Caller ID Authentication Report and Order.

GoCo US (FRN 0030-0166-87)³ is a small voice service provider incorporated under the laws of Delaware. GoCo US provides unified communications (“UC”) solutions, VoIP,

¹ GoCo Technology (U.S.) Inc. does not operate under the name “GoCo US” nor is it registered with the FCC under this name. “GoCo US” is being used for this filing for jurisdictional clarification purposes only.

² GoCo US previously filed its plan referencing its parent company, GoCo Technology, Inc., a foreign service provider incorporated under the laws of British Columbia, operating exclusively in Canada. This entity was folded into its and GoCo US’s ultimate parent company TELUS Communications, Inc. (FRN: 0004-9899-76) (“TCI”) and now provides its services under the marketing name “GoCo by TELUS.” TCI is listed in the RMD as a foreign service provider, and has its own plan on file.

³ GoCo US operates under an International Section 214 Authorization held by its ultimate parent, TELUS Corporation (FRN 0008-8098-32), a British Columbia corporation headquartered in Vancouver, British Columbia, Canada. See ITC-214-MOD-20061016-00567, Section 63.21(h) Notice filed on October 28, 2020. TELUS Corporation does not provide voice services in the United States or Canada.

managed network services, data and related communication services to enterprise customers in the United States as well as supports the US portion of services for the legacy GoCo Technology, Inc.'s enterprise customers' US operations, that are currently serviced by TCI. All of the Company's interconnected VoIP capabilities are enabled by third party IP-voice providers in the United States. GoCo US works with its third party underlying service providers to ensure proper handoff of traffic as required. GoCo US does not have facilities in the United States and does not have control over how calls are routed once they leave the UC environment. Any call identifying information passed on by the third-party providers to other US carriers is required to be in compliance with the Commission's STIR/SHAKEN framework. To the extent that there is cross-border traffic, the Company is working closely with TCI to enforce implementation on the upstream traffic and to ensure proper authentication of traffic occurs for cross-border traffic (Canada-United States) at handoff.⁴

GoCo US takes the issue of robocalls seriously and ensures that its traffic is in compliance with requirements set forth by the Commission's STIR/SHAKEN framework. GoCo US has an internal team of subject matter experts that investigate and respond to requests from the industry traceback consortium, the FCC, law enforcement or other governmental authority. The Company will cooperate with such entities in investigating and stopping illegal robocallers that use its service to originate, carry or process illegal robocalls. GoCo US is committed to responding fully and within 24 hours to all traceback requests it receives and will continue to be an active participant in the process where required.

GoCo US has developed its own tools to help prevent unwanted calls. Within the

⁴ Currently there is no formal agreement between Canada and the United States to support key exchange for cross-border traffic. The Company's traffic originating in Canada and enabled by TELUS meets the STIR/SHAKEN requirements set forth by the Canada Radio-television and Telecommunications Commission ("CRTC").

Company's UC platform, customers may input specific telephone numbers to prevent those numbers from passing through the system for completion. GoCo US works with its inbound telecommunications carriers to ensure blocked numbers do not reach the requesting business customer. This feature is provided at no cost to the customer. Further, GoCo US utilizes TransNexus and the NexOSS as a third-party vendor to perform call analytics for fraud and robocall mitigation.

GoCo US knows its carrier partners and has well established procedures for verifying its customers, including the gathering and reviewing of information such as the customer's physical business location, contact person(s), traffic profiles and when appropriate, credit worthiness, and taxing authority information. GoCo US maintains detailed acceptable use policies for its products and services, outlining what actions it may take should customers or resellers (and their end users) violate these policies, including originating illegal or unwanted robocalls.⁵ GoCo US includes language in its agreements and term sheets prohibiting the use of its service for illegal activities and/or in violation of its acceptable use policy. Customers are made aware of these policies when signing up for service. These policies are available on the company's website.⁶

GoCo US is committed to stopping illegal robocalls and has put in place the resources necessary to respond to traceback requests and to cooperate with any investigation, including any Notification of Suspected Illegal Traffic inquiry issued by the FCC's Enforcement Bureau.
