

Allo-Media
06/20/2021

Allo-Media doesn't work like a standard VoIP carrier. We only provide DIDs to companies & call center, and collect this traffic from other carriers. Hence, we are effectively an inbound carrier and place few to no outbound calls: we only do call forwarding. Therefore, calls are always initiated to our DIDs and do not provide room for robocalls.

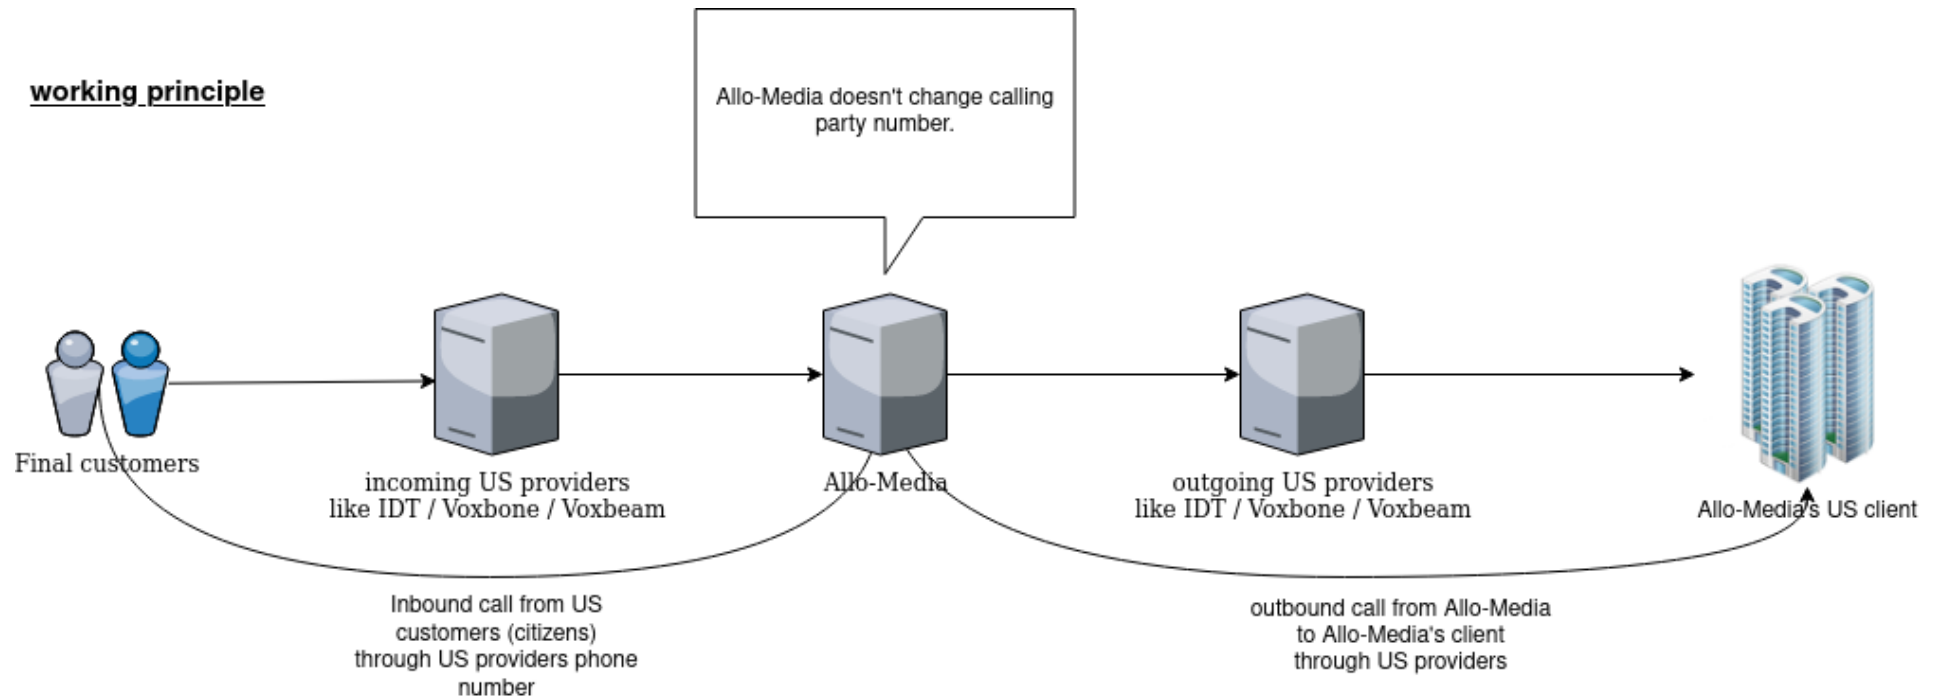

Eventually, the calls are routed through PSTN or private SIP trunks to the final facility answering the calls.

We have only inbound traffic (i.e diagrams page 2), never outbound calls, or robocalls.

- 1) We rent US phone numbers from US providers
- 2) We route these phone numbers to our VoIP infrastructure
- 3) US citizens call our clients through US phone numbers rented from US providers
- 4) We collect these calls
- 5) We forward these calls to our clients.
 - a) Allo-Media is completely transparent with call information, Ex: Calling party number is not modified
- 6) The call is forwarded to our client's private phone number (Ex: customers services)

working principle

Ex of call
