ROBOCALL MITIGATION PROGRAM

Inland Telephone Company ("Company") currently does not provision Session Initiation Protocol ("SIP") to subscriber premises or to the connecting Regional Bell Operating Company ("RBOC") tandem nor does it receive SIP from the RBOC tandem. SIP is used in the Company's network between the transport/termination equipment and the switching equipment; subscribers continue to use their TDM premise equipment; traditional dialing. As the Company's subscriber voice service is a non-IP network, it does not initiate, maintain, or terminate SIP calls. The Company utilizes Metaswitch for its switching solution and all originating numbers are authenticated.

In previous years, Inland Telephone Company reviewed originating access minute, Interstate and Intrastate. In 2018, 2019, 2020, 2021, 2022 and 2023, the average monthly originating access minutes were 138,745, 121,436, 101,274, 91,483, 58,047, and 52,677, respectively. This would demonstrate that Inland Telephone Company is trending downward in originating access minutes which also follows its diminishing telephone voice subscribers. Through this data, the Company does not believe that there is any robocalling being performed in its exchanges.

As the Company does not receive or transmit calls via SIP to/from the connecting RBOC tandem, as of February 28, 2025, none of the voice traffic that originates or terminates on the network of Inland Telephone Company is authenticated or verified with STIR/SHAKEN. Inland Telephone Company had received a small voice service provider's extension under §64.6304(a) of the FCC's rules, which provided the company with a two-year extension of the STIR/SHAKEN implementation deadline, until June 30, 2023. Inland Telephone Company had also received a non-IP networks extension under §64.6304(d) of the FCC's rules, which provides the Company with a continuing extension of the STIR/SHAKEN implementation deadline for those portions of its network that cannot initiate, maintain, and terminate SIP calls.

Inland Telephone Company has been speaking with a "Cloud" Provider of switching that purports to be STIR/SHAKEN compliant. As a small rural local exchange carrier that has service areas that are non-contiguous, Inland Telephone

Company has five (5) switches to upgrade that serve approximately 1,245 voice service customers and moving to a Cloud Provider appears to be the most cost effective.

In the last three (3) years, the Company has not been subject to a Commission, law enforcement, or regulatory agency action or investigation due to suspected unlawful robocalling or spoofing.

I certify under penalty of perjury under the laws of the State of Washington that the foregoing is true and correct.

Dated this 25th day of February, 2026 in Roslyn, Washington.
