

**To: The Telecommunications Regulator In The United States of America, The Federal Communications Commission**

On behalf of 019 Telzar International Communications Ltd. ("019"), this is to certify that:

1. 019's traffic, which uses NANPA numbers, is subject to call filtering that screens out illegal Robocall traffic.
2. 019 will cooperate with the Regulator, law enforcement, and industry groups to investigate Robocall traffic, when duly requested.
3. To avoid originating illegal Robocall traffic, and as part of its Robocall mitigation program, 019 has taken the following specific, reasonable steps:
  - 3.1. All traffic originated by 019 is subject to real-time billing. 019 ensures that usage made by callers, who are not identified by our system, is limited to an amount of 100NIS (approximately 30\$).
  - 3.2. Furthermore, 019 tracks all call logs; and its system automatically alerts and blocks usage should either of the following circumstances exist:
    - a) a caller attempts to initiate an international conference call; or
    - b) an international call exceeds the maximum duration (which varies depending on the call's destination).

In either of the above circumstances, the call is blocked, and an e-mail report is sent directly to 019's Technical Support and Control Center (which is operative 24 hours a day, seven days a week) to further investigate each call.

The report generated as a product of the above process is then sent to the originating operator for its further investigation.
