June 30, 2021

Effective June 30, 2021

Eagle Telephone System, Inc.; has opted to use the know your customer approach to mitigating illegal origination traffic on it's network. In so doing Eagle monitors its customers to seek access to their high-volume use of the network, for instance, we have on file each and every address of our business customers, of which there is 38. We collected information regarding their telephone use practices if they are new to our service. We maintain a vigilant watch on any fraudulent activity. In all honestly, we know literally each and every business customer on our network. We have the State of Oregon Department of Transportation, the State of Oregon Lottery Circuits. We are keenly aware of the State of Oregon's policy for use of their network in combination with the use of our network. We have the U.S.P.S. facility that again is monitored initially by the Federal Government, and secondly by our network tech's. There is a grocery store, liquor store and one motel owned by the same person. They have neither the inclination nor the time to try and play around with "RoboCalls". We have two small café's who have neither the time nor ability to mess around with "RoboCalls", they can't even get anyone to work in today's environment, therefore they are busy working their selves. The other two businesses are ours, Eagle Telephone System and Snake River P.C.S. We do NOT participate in any form or RoboCall activities. We are keenly in tune to our customers and their activities should we notice excessive call originations going on within our network we would immediately contact the proprietor and ask for an explanation.

Eagle Telephone System, Inc.; has received the following types of extensions of the STIR/SHAKE implementation deadline under §64.6304 of the FCC's rules: 1 the small service providers extension (§63.6304(a)) and (2) the non-IP networks extension (§64.6304(d)).

As of June 30, 2021 none of the voice traffic that originates or terminates on the network of Eagle Telephone System, Inc.; is authenticated or verified with STIR/SHAKEN. Eagle Telephone System, Inc.; has received a small voice service providers' extension under §64.6304(a) of the FCC's rules, which provides the company with a two-year extension of the STIR/SHAKEN implementation deadline, until June 30, 2023. Eagle Telephone System, Inc.; has also received a non-IP networks extension under §64.6304(d) of the FCC's rules, which provides the company with a continuing extension of the STIR/SHAKEN implementation deadline for those portions of its network that cannot initiate, maintain, and terminate SIP calls. By June 30, 2023, Eagle Telephone System, Inc. expects to be authenticating and verifying with STIR/SHAKEN voice traffic that originates and terminates on the IP portions of the

company's network that support SIP calls. In addition, Eagle Telephone System, Inc.; will implement a call authentication protocol for voice calls delivered over the non-IP portion of its network that do not use SIP technology when such a protocol is fully developed and finalized by industry standards and the necessary equipment and software is available on the commercial market.

Respectfully,

Rusti A. Lattin

Compliance Secretary
