

Steps in place to mitigate Robocalling

Global Telecommunications Ltd has implemented the following steps to mitigate the illegal robocalling traffic:

1 - All orders taken from direct retail customers will be validated by a human, checked against creditsafe (a UK Credit house) and only validated if the business name is genuine and valid.

2 – Any reseller orders will be tested before release to ensure that the service is genuine and valid.

3 - No services will be supplied to customers who we have not communicated with directly and gained the below data:-

**Company Name
Registered address
Contact Name
Landline number
Company Reg number**

Global Telecommunications Ltd.
