

Advanced Tech Support LLC DBA EQbix

2545 w 80th street #15

Hialeah FL 33016

To whom it may concern:

Advanced Tech Support provides the connectivity medium for clients to connect to the voice service provider IDT. IDT has in place a full STIR/SHAKEN implementation.

All client VoIP terminals are authenticated with Advanced Tech Support's servers and no unauthenticated calls are allowed.

None of the Advanced Tech Support's voice edge servers allow robocalls.

All calls must be initiated from a client VoIP terminal, with all DID digits being manually input every time.

Advanced Tech Support also monitors all clients VoIP traffic on both Advanced Tech Support servers and on IDT platforms and any suspicious activity would immediately be revised.

Thank you

Sincerely yours

Juan Gomez

CEO
