

HEAVYLOGIC

RocketVox, IronVoice, VoiceHub, RoboBlocker

We provide feature rich hosted virtual phone system services for small and medium businesses and take robocall mitigation very seriously, both in and out of our service.

INBOUND MITIGATION

We created RoboBlocker — roboblocker.com — for our customers, and as a SaaS for voip providers that wish to subscribe, a suite of tools to stop unwanted calls. RoboBlocker now fully implements STIR/SHAKEN from our partner carriers, as well as our own technologies such as block lists and machine learning.

OUTBOUND MITIGATION

Our service only allows outbound calls from numbers ordered from our partner carriers. Caller ID spoofing is **NOT** possible with our service.

We do allow bulk automated dialing from trusted customers upon approval, automatically filtering numbers contained within the Do Not Call database, and giving the called party the option to opt-out.
