

ROBOCALL MITIGATION PLAN

1. U.S. Computer Corporation ("USC") commits to respond to all traceback requests from the Federal Communications Commission, law enforcement, and the industry traceback consortium, and will cooperate with such entities in investigating and stopping any illegal robocallers that use USC's service to originate calls, and none of the voice traffic that originates on USC's network is authenticated with STIR/SHAKEN. USC relies on upstream providers that have STIR/SHAKEN compliance, and all voice traffic that originates on USC's network is subject to a robocall mitigation program.
2. USC has implemented, and relies on, a combination of strict firewall rules on provisioning servers with isolation down by IP segments where applicable.
3. U.S. Computer screens all applicants for services to determine if they are intending to use such services for autodialing from a database of numbers for purposes of telemarketing without having received written permission from the called parties.
4. U.S. Computer requires by contract "terms and conditions" that all users of its services comply with applicable laws prohibiting illegal robocalling and providing for blocking and/or termination of services for those that breach such provisions.

Please contact should there be any questions or concerns regarding this plan.

Thank you,
