Robocall Mitigation Plan

WNET TELECOM USA corp. (WNET TELECOM) has taken the following steps to avoid originating robocall traffic as a part of its robocall mitigation program:

WNET TELECOM commits to respond to all traceback requests from the Federal Communications Commission, law enforcement and the industry traceback consortium and to cooperate with such entities in investigating and stopping any illegal robocallers that use its service to originate calls.

WNET TELECOM only utilizes providers that have completed STIR/SHAKEN implementation as our upstream PSTN service providers.

All WNET TELECOM VoIP customers are known to the WNET's management and have been screened as legitimate users of its services.

WNET TELECOM has a small number of trunks and any increase is noticeable and can be investigated.

We will block suspected numbers, suspicious traffic via various traffic monitoring alerts and CDR reports. If we determine that the caller was attempting to originate unlawful robocalls, we either warn them to stop or terminate their service as appropriate.
