

Robocall Mitigation Program Description

Avaria has no need to have a Robocall Mitigation program in place because it is not needed. Avaria is an end user of voice services provided by Bandwidth, which has complete STIR/SHAKEN compliance implemented. Avaria's voice business entails selling IP phone systems that also use Bandwidth as the voice service provider, and so are protected by the STIR/SHAKEN program of Bandwidth. In addition, Avaria currently has no voice service customer of its own and is not planning to engage in finding voice customers in the future.
