2026 Revised Robocall Mitigation Plan

Electronic Corporate Pages, Inc. (ECPI), dba Western Broadband, is a very small voice service provider (VSP) acting as a reseller, dedicated to stopping illegal calls originating in our network and to monitoring calls entering our network. This filing updates ECPI's robocall mitigation efforts.

Electronic Corporate Pages, Inc. purchases origination, termination, and hosted-switch access from VI Communication Services (a Sangoma Company), which provides crucial elements of our RMP as part of their interconnected VoIP wholesale services to ECPI. All voice traffic originating on our network is subject to the robocall mitigation program described below, subject to technical revisions implemented by Provider. ECPI does not have a parent company or any other entities controlling its operations.

Know Your Customer

We follow the best practices for vetting caller identity described by the NANC Call Authentication Trust Anchor Working Group.

(<https://docs.fcc.gov/public/attachments/DOC-367133A1.pdf>).

ECPI is a small service provider; we understand our customers' needs before we sell our voice services to them. This understanding provides us with the ability to mitigate the potential of a customer initiating illegal robocalls.

International Subscribers

ECPI does not sell origination or termination services to subscribers outside of the United States.

Acceptable Use Policy

ECPI maintains an Acceptable Use Policy ("AUP") that subscribers must accept before being permitted to use ECPI's broadband or voice services.

Traceback Requests

ECPI is committed to responding in a complete and timely manner to all traceback requests from the Federal Communications Commission, law enforcement, state attorneys general, Provider, and the industry traceback consortium. Furthermore, ECPI is

committed to cooperating with such entities to investigate and stop any illegal robocallers that use ECPI's service to originate calls. Subscribers are required to comply with traceback requests via our AUP. Traceback requests can be sent to ecpiadmin@ecpi.com for immediate processing by ECPI.

Investigation of High-Volume Network Traffic, Suspicious Calls, and Calling Patterns

ECPI continuously monitors calling patterns in and out of our network to identify fraudulent traffic, including robocalling. ECPI will block services to a customer if it determines that the customer is using the services for any illegal activities, including robocalling. Such a customer's agreement will be terminated if the violation is determined to be intentional.

ECPI provides customers with equipment that is configured to limit a few concurrent calls.
