

TDC net Robocall mitigation

All TDC net's international calls to US are routed to iBasis via ISUP connections today.

All international calls are checked by a IN service (TelCordia) before leaving Denmark. The IN service is checking on B-number today but will end September 2021 be changed to check on A-number as well for country code +1.

If a A-number is used to generate unwanted calls like Robocall it can be blacklisted on request and placed in a spoofing table in the IN service. A-numbers placed in the spoofing table will not be able to make calls to country code +1.
