

We certify that we utilize full STIR/SHAKEN Protocols within all our hosted FreePBX Servers, alongside the use of the integrated firewall and intrusion detection that monitors call traffic 24/7 and blocks any IP addresses that attempts to gain access to our server at a set number of tries. We also make sure no calls are originated or placed outside of the IP addresses for the businesses we serve. We also utilize Caller ID screening for SPAM calls when a business is receiving multiple SPAM calls. We also blacklist numbers that repeatedly SPAM our customers.
