

No STIR/SHAKEN Implementation – Performing Robocall Mitigation

Atel Communications is a small telecommunications company located in Guatemala City, Centro America.

We directly provide phone numbers to registering customers that complete the registration for services that they require and comply with our tariffs and acceptable use policies.

Atel Communications originates and terminates calls from and to the United States via other intermediate carriers.

Atel Communications is working with upstream carriers that verify that calls are signed properly for STIR/SHAKEN.

Atel Communications sets all Caller ID's for customers based on the ownership of the DID.

No customers are allowed to set their own Caller ID.

Atel Communications certifies that it commits to respond to all traceback requests from the Federal Communications Commission, law enforcement, and the industry traceback consortium, and to cooperate with such entities in investigating and stopping any illegal robocallers that use its service to originate calls.

Atel Communications also certifies:

- All outgoing calls must originate from specifically authenticated users.
- All outgoing calls are sending to our SIP Trunk provider which is compliant to the FCC STIR/SHAKEN guidelines.
