

Otubio is a prepaid calling service that helps customers make international calls mostly to destinations outside the USA and Canada

Robocall Mitigation

Customers can only make calls using their original phone numbers. When they register on the Otubio app, their phone numbers have to be verified via authentication before they are able to access the app. They are only able to make calls with their caller ID's. Otubio does not allow auto generation of calls and does not support robocalls. All calls are made by customers and require human interaction. We also have security systems in place that detect multiple calls originating from same IP's and can be blocked when such calls are detected.
