Federal Communications Commission

Subject: Robocall Mitigation Database and Contact Information Update

Dear FCC Team,

I am writing on behalf of **GlobalTel Communications** to provide clarification about our current services, our compliance posture, and to update our contact information to ensure proper communication moving forward.

At present, GlobalTel's services consist solely of the resale of Toll Free and DID forwarding. Our partner, **7G Networks**, is the network provider for these inbound DID's and toll-free calls, which are switched to predetermined destination numbers ("ring-to numbers") provided by our customers. 7G Networks also provides the outbound termination to these ring-to numbers.

We want to highlight that **7G Networks has a fully implemented STIR/SHAKEN solution** and is certified in the FCC's Robocall Mitigation Database. For your records, the **7G Networks RMD number is RMD004623** and the **OCN is 986K**.

GlobalTel will fully cooperate with any robocall complaint in accordance with **47 CFR § 64.6305(a)** and **47 CFR § 64.6301(a)(1) and (2)**.

In the past, GlobalTel operated Dial91, a calling card service that was eventually phased out due to declining sales as our customers increasingly transitioned to free communication services such as WhatsApp. During this transition, our email account **noc@globaltel.com** was not consistently monitored, which regrettably caused important FCC notices to be directed to the junk folder and overlooked.

To prevent this from happening again, we have **updated our official FCC point of contact email to erik@globaltel.com**, an account that is actively always monitored.

We remain committed to cooperating with the FCC's robocall mitigation requirements and maintaining open lines of communication.

Thank you for your attention to this matter. Please let us know if any additional information or documentation is required.

Sincerely,
Erik Santos

NOC Director
