

Robocall Mitigation Policy

Robocall Mitigation Compliance with TRACED Act

Date	On behalf of	Change Summary
June 22, 2023	TRS Solutions, LLC	Initial Version
February 20, 2024	TRS Solutions, LLC	

Objective:	Establish and follow a policy that is compliant with TRACED Act
-------------------	---

I. Overview

The FCC requires that all providers certify in the Robocall Mitigation Database their status for compliance with STIR/SHAKEN. Those not yet fully compliant must implement and certify to the implementation of a Robocall Mitigation Plan to ensure that this illegal traffic does not originate on their networks as they work within the industry to become fully compliant.

The Commission requires voice service providers to develop a Robocall Mitigation Plan that:

- details the reasonable steps taken to avoid originating illegal robocalls
- demonstrates a commitment to respond to traceback requests to cooperate with investigating and stopping illegal robocalls
- is filed in the Robocall Mitigation Database.

This mitigation plan is submitted on behalf of TRS Solutions LLC. TRS Solutions LLC serves communities in the state of Georgia. TRS Solutions LLC will be referred to as TRS throughout this document.

TRS is a small voice service provider with SIP services provided by VOIP Carriers.

TRS is partnering with a trusted SIP service providers to implement their STIR/SHAKEN and their inherent robocalling mitigation framework including: Prevention, Detection, and Mitigation.

II. General Prohibition Against Illegal Robocalling

TRS end user services are subject to restrictions contained in its published legal notices and all executed services orders include the requirement that service is provided pursuant to its terms of service ("TOS") requirements.

Its existing TOS prohibit activities normally associated with Robocalling including, but not limited to:

Robocall Mitigation Policy

- providing altered, deceptive, or false information about the identity of the sender or the origin of a message or phone call;
- violating any applicable local, state, or federal law; using the TRS service to engage in or in connection with fraudulent activities

In addition, the company is updating its TOS to expressly reference the prohibition on robocalling and all current subscribers will receive notice of the publication of its updated TOS.

TRS's end users are notified that TRS may take action up to suspension or termination of service for violation of the TOS.

III. Know Your Customer

TRS utilizes the mitigation technique of "Know Your Customer." TRS is a small long established provider that maintains a close relationship with its subscribers. Its customers are generally "mom and pop" users and few of its total customer base have enough call paths to generate the high volume of traffic associated with robocalling allowing us to use targeted in-house analytics to monitor, alert and apprehend suspected robocalling activities.

TRS has set a call path level based on its average customer size. The level – referred to as "large volume calling capability" – is subject to change.

TRS has a screening for new customers requesting service at or above large volume calling capability levels:

- We will not deploy large volume calling capability or any capability as a residential service or at an address shown in the company records as being residential
- Businesses requesting any calling capability must provide a tax ID and verification as to the nature of the business
- We verify addresses to look for overlapping / multiple deployed voice path subscriptions
- A TRS representative may visit the premise of the business to verify the number of users at the location is appropriate for the volume of calling

IV. Network Monitoring

TRS continually uses its trusted provider's tools that allows for real-time monitoring of traffic and will flag and alert call patterns indicative of potential illegal robocalling. Additional capability is being added to the software which will automatically disable any subscribers associated with flagged call patterns.

Robocall Mitigation Policy

V. Traceback and Enforcement Cooperation

TRS will actively cooperate with the traceback community including the FCC, law enforcement, and The Industry Traceback Group (ITG) to investigate and stop illegal robocalls. TRS will dedicate sufficient resources to provide prompt and complete responses to traceback requests.
