Registration and certification to the FCC's Robocall Mitigation database

To whom it may concern

Dear colleague,

Mobile TeleSystems Joint Limited Liability Company is the leading mobile operator in the Belarusian market. Mobile TeleSystems JLLC was registered with the Ministry of Foreign Affairs of the Republic of Belarus on 4 April, 2002.

The company founder on the Belarusian side is Beltelecom, Republican Unitary Enterprise. On the Russian side is Mobile TeleSystems, OAO (JSC).

Mobile TeleSystems, JLLC (MTS Belarus) carries out activities in the field of telecommunications under the licence of the Ministry of Communications and Informatization of the Republic of Belarus, registration No. 926, valid till 30 April, 2022.

Recently Mobile TeleSystems, JLLC got the information from our roaming partner AT&T about a Federal Communications Commission ("FCC") Order on Robocalling that requires our attention as the September 28, 2021 deadline for international service provider registration approaches.

AT&T explains this is in connection with the enactment of the TRACED Act in December 2019, where the FCC adopted a rule prohibiting U.S. providers from accepting voice traffic from certain foreign voice service providers unless the foreign provider appears in a FCC Robocall Mitigation database.

Thus, Mobile TeleSystems, JLLC was warned that its registration and certification to the FCC's Robocall Mitigation database is critical to avoid potential interruptions to our traffic to the United States as the FCC requires US Carriers to block incoming traffic from foreign carriers that do not specify how they will adhere to robocalling mitigation efforts.

Please be noted that a CORES account was created by Mobile TeleSystems, JLLC and a FRN (FCC Registration Number) was got at the FCC Robocall Mitigation Home Page (https://fccprod.servicenowservices.com/rmd?id=rmd_welcome). But some difficulties were encountered in registering, in particular, we were confused about the E-signature field. Belarus is a country where electronic signature is not available. Nevertheless, this field was filled in by entering the name of Vladimir Karpovich, Chief Executive Office and this letter is attached as an official confirmation of successful registration in a FCC Robocall Mitigation database.

Mobile TeleSystems, JLLC would also like to inform that it has No STIR/SHAKEN Implementation – Performing Robocall Mitigation.

Mobile TeleSystems, JLLC complies with the procedures and provisions concerning fraudulent or unauthorized traffic set out in the GSM Association Permanent Reference Documents and in International Roaming Agreements signed with all its roaming partners.

Mobile TeleSystems, JLLC, in particular, has taken the following specific reasonable steps to avoid originating illegal robocall traffic:

- to prevent fraud on telecommunications networks MTS Belarus uses «Fraud management system», developed by Hewlett Packard, and
- «HexRT», the software system developed by Hexagon Group.
- Customers on MTS Belarus' network are identified and MTS Belarus transfers the original CLI information from its own network as well as from other connected networks, if such information is received.
