

Yellowknife Wireless, LLC
FRN 0021907282
Robocall Mitigation Program

As part of its robocall mitigation program, Yellowknife takes reasonable steps to authenticate callers:

- All callers must authenticate with a username and password
- SIP sessions which contain the username and password may be encrypted
- Each username and password associates the caller with a specific phone number
- No caller is allowed to set their own caller ID (caller ID is assigned by Yellowknife)
- Caller ID is pre-defined and stored at Yellowknife

Any calls which originate from the Yellowknife network will contain a caller ID pre-assigned upon customer setup.
