To Whom It May Concern.

Everest Communications Group Inc. (ECG) is a small Managed Service Provider supplying Voice over IP (VoIP) services to the business community. We specialize in small business accounts with hosted voice requirements that are not Call Center related. We only resell SIP Trunk services from Attested Stir Shaken providers such as Commio and FlowRoute. All of our client numbers are ported to the perspective SIP Providers as a requirement of providing services.

ECG does not supply service to Call Centers of any type. ECG provisions client SIP connections with the appropriate Caller ID as required to meet the Stir Shaken caller identification requirement. ECG does not own a voice switch or provide any secondary routing of calls for any client or 3rd party service provider. ECG works with its SIP Providers to ensure a secure and robo free calling environment for our clients. We vet our clients to ensure they are not part taking in any robo calling activities and monitor their calling patterns. Our typical client maintains less than six (6) SIP trunks per site supporting 5 – 10 users.

ECG uses Session Border Controllers (SBC) at the customer premise to enforce call control and monitoring capabilities. All numbers provisioned for origination and termination are hosted by our SIP Providers which are Stir Shaken compliant.
