

Robocall Mitigation Plan for Triton Polling & Research, Inc.

Triton Polling & Research, Inc provides public opinion polling services to customers across the nation including major universities, non-profits, fortune 500 corporations, among others.

Inbound and out-bound voice implementations are provided by upstream vendors that have substantially implemented STIR/SHAKEN across their networks and sign 100% of calls made on behalf of Triton Polling & Research.

Triton Polling & Research does NOT provide any robocall services to third parties. We utilize robocalling technology exclusively for internal purposes to conduct scientific opinion research. Triton does not provide direct access to any underlying voice infrastructure via API or any other mechanism. In addition, Triton Polling & Research protects against robocalls within its own infrastructure with the following safeguards.

In the event of a traceback request from the Commission, law enforcement, or the traceback consortium, Triton Polling & Research, Inc. will fully cooperate to help investigate and stop any illegal robocallers that originate calls from our service.
