

XBLUE Networks, LLC
Robocall Mitigation Plan

Updated February 2026

Introduction

This document details the reasonable steps and actions taken by XBLUE Networks, LLC ("XBLUE") to mitigate and eliminate illegal robocalling. XBLUE has an ongoing commitment to scan for and help alleviate illegal robocalling by pre-qualifying prospective customers, monitoring existing customers for traffic patterns indicative of prohibited robocalls, and working with other providers and regulatory agencies in combatting fraudulent voice activity.

XBLUE is an STI-GA authorized Service Provider registered with the Secure Telephone Identify Policy Administrator (STI-PA) and participates in the Signature-based Handling of Asserted Information Using toKENs (SHAKEN) ecosystem. The Company has contracted with Bandwidth inc. to authenticate its originating calls using XBLUE's certificate.

Know Your Underlying Provider

XBLUE and its upstream providers, Bandwidth and Skyetel, have agreed to work together diligently to mitigate all illegal robocalls, including cooperating fully when receiving traceback requests.

Know Your Customer

Screening interviews are performed to understand potential customer business models and the potential, or lack thereof, for involvement in fraudulent robocalling schemes.

In our research of the prospect, XBLUE will not activate clients that provide anonymous information or where data mismatches are found. Additionally, prospects are required to agree to XBLUE's strict policies and contractual terms prohibiting the act of fraudulent voice activity as a condition of doing business with XBLUE.

Individuals associated with prospects or current customers who have been known to act improperly or otherwise be involved in fraudulent robocalling will cause their companies to be rejected by XBLUE as a customer and any existing customer relationships could potentially be severed.

Traceback Requests

XBLUE is committed and will respond fully within 24 hours to all Traceback Requests from the FCC, law enforcement agencies, and the industry traceback consortium and vows to cooperate with these agencies in investigating and stopping any illegal robocallers that use our service to make calls. XBLUE has devoted sufficient resources to provide prompt and complete information to traceback requests. Our point of contact to handle all traceback requests is:

XBLUE Support
Support Manager
866-925-8312

Upon calling our dedicated VOIP Services Department, a ticket is opened tagged "Traceback". An initial investigation is done to confirm DID's that are owned by the customer. When required the VOIP team opens a ticket with the handling underlying carrier. We will then identify if calls apply to originating DID rules and extract the logs in question.

If a traceback exposes an existing customer as the source of fraudulent robocalls, or as having transmitted fraudulent robocalls, a demand for an explanation and verification of mitigation of the traffic is issued to the customer. If the fraudulent traffic is not remediated, XBLUE immediately begins rejecting all traffic except emergency calls (911) from the offending customer.

Telephone Numbers

A Telephone Number ("TN") based caller identity is the originating phone number included in call signaling used to identify the caller for screening purposes that is uniquely associated with the subscriber. A subscriber is permitted to use a TN as a caller identity if a TN is directly managed by XBLUE and/or obtained by XBLUE from XBLUE's underlying carrier for use by the subscriber. Numbers can also be allocated by XBLUE or ported using information from previous bill matching customer information.

For subscribers with multi-line telephone systems, XBLUE and our underlying provider only allow calls to be connected if the originating number matches one of the TN's assigned to the subscriber. This screening capability enables an automated and secure method of validating originating telephone numbers.

International Calling

XBLUE is not currently an international voice services provider. If at any time XBLUE does decide to sell our services to international customers using North American Numbering Plan resources, we will familiarize ourselves with and develop best practices for full vetting of such customers and work with our underlying provider to perform the necessary telephone number validation on all international originated calls.

Call Analytics

XBLUE has not directly engaged any third parties to perform call analytics. As a reseller, XBLUE relies on our underlying providers and/or their third-party vendors to determine if originating calls should be blocked based on call analytics practices. In our efforts, XBLUE does monitor for calls to be sourced only from known locations and known DID's/TN's.

Ongoing Robocall Mitigation

XBLUE monitors and examines call detail records (CDRs) on a repeating basis to detect suspicious call activity and/or calling patterns. When we and/or our underlying provider detect network usage patterns consistent with illegal robocalls or suspect illegal robocalling is taking place, we will immediately seek to identify the party that is originating, terminating, or routing these calls so that we may take appropriate action. The actions taken may include, but are not limited to initiating a traceback investigation; verifying that the originating customer owns or is authorized to use the Caller ID number; determining whether the Caller ID name sent to a receiving party matches the customer's corporate and/or d/b/a name; block the party's ability to originate, terminate, or route calls on the network; and/or providing notice to law enforcement authorities.

As part of our Plan to mitigate and prevent any originating robocalls, we are committed to early identification and investigation of possible robocalling conditions. Among other things, we watch for higher-than-normal subscriber traffic volume, including large bursts of traffic in small timeframes or spikes in usage. We also monitor for originating calls of short duration and low call completion percentages, originating calls with sequential called to number dialing patterns.
