

To whom it may concern,

emak Telecom has taken the following specific steps to ensure it does not originate any illegal robocall traffic:

- 1) As a hosted PBX provider, we do not offer nor support any form of automated calling systems and/or dialers within our platform.
- 2) We actively monitor outgoing traffic continuously through automated tools. Outgoing calls are subject to reasonable usage limits including the following traffic characteristics per line per day:
 - a. ASR: More than 60%
 - b. Short calls: no more than 15% of answered calls with 15 seconds or less duration

Furthermore, as a small voice service provider with significantly fewer than 100,000 voice service subscriber lines, we have received an extension to the STIR/SHAKEN implementation deadline under 47 CFR § 64.6304 section a.

Sincerely,

A handwritten signature in blue ink that reads "Moullas".

Corey Moullas

Network Architect, emak Telecom
