

Labrador AI, Inc.

Robocall Mitigation Plan

1. Voice Service Provider:

Labrador AI utilizes Bandwidth LLC as its underlying voice services provider. Bandwidth LLC implements robust policies, procedures, and technical safeguards to actively mitigate illegal robocalls and caller ID spoofing.

2. Traceback Commitment:

Labrador AI commits to full cooperation with traceback requests received from the Federal Communications Commission (FCC), law enforcement agencies, and the registered traceback consortium. Labrador AI will promptly investigate and respond to all such requests to aid in identifying and stopping illegal robocall activity.

3. STIR/SHAKEN Compliance:

Labrador AI serves fewer than 100,000 voice subscriber lines and meets its STIR/SHAKEN compliance obligations through its upstream provider, Bandwidth LLC, which authenticates outbound voice traffic.

4. Robocall Mitigation Measures:

Labrador AI, in conjunction with Bandwidth LLC, implements advanced call analytics to monitor and detect potential robocall activities. This technology tracks:

- Unusual call volumes from single numbers.
- High-frequency short-duration calls.
- Calls from invalid or unallocated numbers.
- Calls flagged on Do Not Originate lists or in FCC complaint databases.

Upon detecting any suspicious activity:

- Immediate investigation is triggered.
- Confirmed unlawful robocall attempts result in warnings to cease or immediate termination of services, as per Labrador AI's Terms of Use.

Labrador AI maintains vigilant monitoring and continually adapts its strategies to mitigate the evolving threat of illegal robocalling.
