

ReminderDental provides outbound patient reminders using an automated system. All phone calls originate from a web application, and as such there is no need to allow phones to connect to the server, and all IP traffic that could be used for making calls is blocked from all IP addresses, with the exception of our VOIP provider, the web server, and our office.

Regardless of said security measures, I intend to be implementing a full STIR/SHAKEN solution in the upcoming week.

Alan Halls

ReminderDental CEO

A handwritten signature in black ink, consisting of a series of fluid, connected strokes that form a stylized, elongated shape.
