

Chekkkit Geolocation Services Inc

Re: STIR/SHAKEN Implementation.

Chekkkit Geolocation Services Inc uses Bandwidth and Twilio for their outbound voice calling services. Both Bandwidth and Twilio have complete STIR/SHAKEN implementations when calls are contained within their networks. Calls leaving their networks are given partial attestation.

All outbound calls performed by Chekkkit are performed by the above mentioned services. As they are leading voice networks in the US, Chekkkit follows all guidelines provided by Twilio and Bandwidth.

Chekkkit commits to respond to all traceback requests from the Commission, law enforcement, and the industry traceback consortium, and to cooperate with such entities in investigating and stopping any illegal robocallers that use its service to originate calls.
