

**Juvo Technologies, LLC**  
**Robocall Mitigation Plan**

## **Introduction**

This document details the reasonable steps and actions taken by Juvo Technologies, LLC (“Juvo”) to mitigate and eliminate illegal robocalling. Juvo has an ongoing commitment to scan for and help alleviate illegal robocalling by pre-qualifying prospective customers, monitoring existing customers for traffic patterns indicative of prohibited robocalls, and working with other providers and regulatory agencies in combatting fraudulent voice activity.

Juvo provides interconnected Voice over Internet Protocol (“VoIP”) calling services. All telecom services are provided on a resale-only basis. As a telecom reseller, Juvo is dependent on our underlying provider’s assistance with monitoring their networks for fraudulent voice calling patterns. Our underlying VoIP providers are White Label Communications, LLC and VOXO, LLC.

## **Know Your Underlying Provider**

Juvo Technologies, LLC has master service agreements with White Label Communications, LLC and VOXO, LLC and has received written assurances from their officials that it has and will continue to sign calls submitted to Juvo Technologies, LLC and will abide by the FCC’s STIR/SHAKEN and robocall mitigation rules in all respects when providing voice services to Juvo. Juvo and its upstream providers have agreed to work together diligently to mitigate all illegal robocalls, including cooperating fully when receiving traceback requests.

## **Know Your Customer**

Screening interviews are performed to understand potential customer business models and the potential, or lack thereof, for involvement in fraudulent robocalling schemes

In our research of the prospect, Juvo will not activate clients that provide anonymous information or where data mismatches are found. Additionally, prospects are required to agree to Juvo’s strict policies and contractual terms prohibiting the act of fraudulent voice activity as a condition of doing business with Juvo.

Individuals associated with prospects or current customers who have been known to act improperly or otherwise be involved in fraudulent robocalling will cause their companies to be rejected by Juvo as a customer and any existing customer relationships could potentially be severed.

## **Traceback Requests**

Juvo is committed and will respond fully within 24 hours to all Traceback Requests from the FCC, law enforcement agencies, and the industry traceback consortium and vows to cooperate with

these agencies in investigating and stopping any illegal robocallers that use our service to make calls. Juvo will devote sufficient resources to provide prompt and complete information to traceback requests. Our point of contact to handle all traceback requests is:

Shane Smith  
Operations Manager  
(601) 329-2122

Upon calling our dedicated Traceback Contact, we would look up the call in our database of either White Label Communications or VOXO. If additional assistance was needed, we would contact WLC or VOXO support for additional resources and help.

If a traceback exposes an existing customer as the source of fraudulent robocalls, or as having transmitted fraudulent robocalls, a demand for an explanation and verification of mitigation of the traffic is issued to the customer. If the fraudulent traffic is not remediated, Juvo immediately begins rejecting all traffic from the offending customer.

### **Telephone Numbers**

A Telephone Number (“TN”) based caller identity is the originating phone number included in call signaling used to identify the caller for screening purposes that is uniquely associated with the subscriber. A subscriber is permitted to use a TN as a caller identity if a TN is directly managed by Juvo and/or obtained by Juvo from Juvo’s underlying carrier for use by the subscriber. Numbers can also be allocated by Juvo or ported using information from previous bill matching customer information.

For subscribers with multi-line telephone systems, Juvo and our underlying provider only allow calls to be connected if the originating number matches one of the TN’s assigned to the subscriber. This screening capability enables an automated and secure method of validating originating telephone numbers.

### **International Calling**

Juvo is not currently an international voice services provider. If at any time Juvo does decide to sell our services to international customers using North American Numbering Plan resources, we will familiarize ourselves with and develop best practices for full vetting of such customers and work with our underlying provider to perform the necessary telephone number validation on all international originated calls.

## **Call Analytics**

As a reseller, Juvo must rely on our underlying provider and/or their third-party vendors to determine if originating calls should be blocked based on call analytics practices.

## **Ongoing Robocall Mitigation**

Juvo monitors and examines call detail records (CDRs) on a repeating basis to detect suspicious call activity and/or calling patterns. When we and/or our underlying provider detect network usage patterns consistent with illegal robocalls or suspect illegal robocalling is taking place, we will immediately seek to identify the party that is originating, terminating, or routing these calls so that we may take appropriate action. The actions taken may include, but are not limited to initiating a traceback investigation; verifying that the originating customer owns or is authorized to use the Caller ID number; determining whether the Caller ID name sent to a receiving party matches the customer's corporate and/or d/b/a name; block the party's ability to originate, terminate, or route calls on the network; and/or providing notice to law enforcement authorities.

As part of our Plan to mitigate and prevent any originating robocalls, we are committed to early identification and investigation of possible robocalling conditions. Among other things, we watch for higher than normal subscriber traffic volume, including large bursts of traffic in small timeframes or spikes in usage. We also monitor for originating calls of short duration and low call completion percentages, originating calls with sequential called to number dialing patterns.
