

Based on "A" Number Validation.

1. "A" numbers (also known as CLI or ANI)
2. Fraud prevention
3. Regulatory (US FCC Robocalling & STIR/SHAKEN, UK OFCOM Do Not Originate)
4. Loss of traffic due to reduction in quality when calls/messages are blocked
5. Breach regulatory obligations (eg Protect/grow subscriber market share from 'positive' marketing of 'Trusted' status)
6. Validation of "A" numbers specifically (vs general number validation) against :-
7. Global Number Range (GNR) data, Valid format, valid length, positively allocated, valid type, No CLI cases blocked
8. Most comprehensive US DNO list available in the market
9. Unallocated ranges/numbers and manually set DNO
