

Siptotalk techniques to stop the illegal calls

- Blocking of IP in SDP on a Country/Network/Datacenter/Per IP basis
- CPS/Port limits based on IP in SDP/Customer/Provider/Caller/Callee/LRN/RPID-PAI
- Predefined ACL blocking IP in SDP coming from all non-US virtual server/cheap hosting datacenter owned subnets.
- Random sample of calls transcribed and run through analytics looking for scam keywords. These calls are flagged and customer notified and blocked.
- Predefined ACL blocking known bad User Agents
- On receipt of Traceback, customer is notified and blocked. The duration of the block is at a minimum 24 hours.

A handwritten signature in black ink, appearing to read "Nawar", located at the bottom right of the document.
