Robocall Mitigation Database (RMD) Filing – Robocall Mitigation Program Description

Filing Entity Role: Voice Service Provider Only

Date: February 2, 2026

To whom it may concern:

RE: Robocall Mitigation Program Description (47 C.F.R. § 64.6305)

As a voice services provider, RevTel Communications, LLC is committed to remain compliant with robo-call and spam-calling mitigation into 2026 as we have since 2022. RevTel Communications, LLC attests that we are compliant with FCC regulations described in **47 C.F.R. § 64.6305**. Systems deployed and policies adhered to are designed/drafted to be compliant.

Maintaining and enhancing our efforts from previous years, our robocall mitigation measures include:

- **Inbound identification and scoring:** Reputation scoring, token validation, and identification of inbound calling without proper attestations or valid source details (STI), with indication of poor/elevated scoring calls to end-users for their chosen disposition of same.
- **Outbound tokenization/certification:** Properly adding tokenization/certification to outbound calls made by our subscribers so unsuitable usage of service can be identified and restricted/prevented. All outbound calls are tokenized with our registered certificate, linked in our tokenization header(s).
- **Acceptable Use controls:** Prevention of origination of calling that would be classified as “robo-calling” or “spam-calling” through “Acceptable Usage” agreements with our subscribers, inhibiting calling of non-compliant users.
- **Do Not Originate (DNO):** We’ve added additional function to comply with the Do Not Originate (“DNO”) mandates added in 2025.

Call analytics / vendor solution:

RevTel Communications, LLC is using the “ClearIP” solution, partnering with TransNexus. The solution, as RevTel Communications has configured, performs STIR/SHAKEN validation, caller reputation scoring, and observing any call attestations in that processing. Calls that are fully validated are, by default, indicated to the subscriber(s). Inbound calls with elevated SPAM/reputation scores are indicated and our platform enables customers to route those calls to suit their needs.

Network placement:

Our call-processing platform interfaces our wholesale carrier trunks and is the gateway between our subscribers and the wholesale carrier networks. Calls inbound and outbound are passed through the ClearIP processing platform for STI validation/authentication as described above.

Traceback cooperation (24-hour commitment):

RevTel Communications, LLC commits to respond fully to traceback requests within **24 hours** from the FCC, law enforcement, and the industry traceback consortium, and to cooperate with such entities in investigating and stopping illegal robocallers.

24-hour traceback / mitigation contact email: embracetac@itvoice.com

Prior two-year enforcement/investigation disclosure:

Neither RevTel Communications, LLC nor any affiliated entity has been the subject of a formal Commission, law enforcement, or regulatory agency action or investigation in the prior two years with accompanying findings of actual or suspected wrongdoing related to illegal robocalls/spoofing or a deficient Robocall Mitigation Database certification or mitigation program description.

Respectfully,

David Thomson

Sr. Voice Systems Architect
