

Calvient's Robocall Mitigation Statement:

Calvient ensures compliance with FCC regulations on robocalls through the following measures:

Voice Traffic Accountability: All outgoing voice call traffic is generated by Calvient.

Campaign Management: Calvient oversees the setup and management of voice campaign requests from our clients, ensuring alignment with regulatory standards and our service commitments.

Client Verification: We require comprehensive business and accounting information from all clients to enable the use of our voice solutions, facilitating transparency and accountability.

Number Acquisition and Registration: Phone numbers utilized for client services are procured from the clients themselves. These numbers are then duly registered with appropriate industry Traceback and Robocall Mitigation entities to maintain traceability and compliance.

By following these steps, Calvient upholds its responsibility to prevent the origination of illegal robocall traffic.
