

Ecrio is the leading supplier of end-to-end critical communication software, an essential component for deploying 5G/LTE Private Networks. Ecrio's flagship product, iota-e, is powered by the innovative FlexEDGE™ technology to deliver standards-compliant communication software for Private Cellular Networks. It features communication capabilities covering person-to-person native or OTT voice or video calls, Mission Critical Push to Talk (MCPTT) enabling seamless voice or video communications.

Robocall Mitigation

Iota-e is deployed within a private 5G/LTE network. Our HSS contains a database of subscribers who are authorized to access the network.

Subscribers are authenticated while accessing communication features such as voice calls. Calls from Unknown users (including robocalls) are blocked/rejected by the system automatically.

Auto generation of calls is not supported. Calls within iota-e are initiated by human interaction (Registered subscribers).
