

Our statement on STIR/SHAKEN implementation

IDEAtells B.V. currently has no STIR/SHAKEN implementation. Please see below for our reasons as to why:

- All users of the platform are only required to dial out with numbers that are owned by the customer.*1 US phone numbers are bought from a third party and assigned to a customer. We have no direct interconnections with US carriers.
- Out carriers (transit providers) that provide routes to the US have full STIR/SHAKEN implementation and can provide attestation for calls originating from our network.
- Currently, STIR/SHAKEN implementation is not required for foreign voice operators. IDEAtells primary market is in the Netherlands

*1 Some customers are allowed to dial out with numbers they do not own. If abused, the customer will be denied service.
