STIR/SHAKEN & Robocall Mitigation Plan – 2023

Know Your Customer We follow the best practices for vetting caller identity described by the NANC Call Authentication Trust Anchor Working Group. (<https://docs.fcc.gov/public/attachments/DOC-367133A1.pdf>)

Traceback

We respond to all traceback requests from the Commission, law enforcement, and the registered traceback consortium and cooperate with such entities in investigating and stopping any illegal robocallers that use our service to originate calls.

STIR/SHAKEN

We have fully implemented outbound STIR/SHAKEN on all IP portions of our network. Voice traffic that originates, on non-IP segments of our network, continues to be subject to the robocall mitigation program described below.

Robocall Mitigation

Program We use software provided by TransNexus to monitor our outbound voice traffic in real time to prevent the origination of illegal robocalls. The software provides detailed reporting identifying suspected illegal robocalls and alerts us if we originate any calls where the calling number is invalid, unallocated, on a Do Not Originate list, in the FCC consumer complaint database or has a poor reputation. We immediately investigate any identified calls to determine if the caller was attempting to originate unlawful robocalls. If we determine that the caller was attempting to originate unlawful robocalls, then we either warn them to stop or terminate their service as appropriate
