

Robocall Mitigation Plan

Introduction

This document details the reasonable steps and actions taken by Great Exposure, Inc. (GE) to mitigate and eliminate illegal robocalling. GE's calling services are accessible exclusively via the software's UI and does not allow for automated (API) access. This means all calls placed via GE's calling services must be placed by a real person. It is fundamentally nearly impossible for robocalls to be placed via GE's calling services. In addition, GE has an ongoing commitment to scan for and help alleviate illegal voice activity by pre-qualifying all prospective customers and working with other providers and regulatory agencies in combating fraudulent voice activity.

All telecom services are provided on a resale-only basis. As a telecom reseller, GE is dependent on our underlying provider's assistance with monitoring their networks for fraudulent voice calling patterns.

Know Your Underlying Provider

GE has a master service agreement with our underlying providers and has received official assurance from them that it has and will continue to sign calls submitted to GE and will abide by the FCC's STIR/SHAKEN and robocall mitigation rules in all respects when providing voice services to GE. GE and its upstream providers have agreed to work together diligently to mitigate all illegal robocalls, including cooperating fully when receiving traceback requests.

Know Your Customer

Screening interviews are performed to understand potential customer business models and the potential, or lack thereof, for involvement in fraudulent robocalling schemes.

Prospects are required to agree to GE's strict policies and contractual terms prohibiting the act of fraudulent voice activity as a condition of doing business with GE.

Individuals associated with prospects or current customers who have been known to act improperly or otherwise be involved in fraudulent robocalling will cause their companies to be rejected by GE as a customer and any existing customer relationships could potentially be severed.

Call Analytics

As a reseller, GE must rely on our underlying provider and/or their third-party vendors to determine if originating calls should be blocked based on call analytics practices.

Traceback Requests

GE is committed and will respond fully within 24 hours to all Traceback Requests from the FCC, law enforcement agencies, and the industry traceback consortium and vows to cooperate with these agencies in investigating and stopping any illegal robocallers that use our service to make calls. GE will devote sufficient resources to provide prompt and complete information to traceback requests. Our point of contact to handle all traceback requests is:

GE Support:

877-781-1875

If a traceback exposes an existing customer as the source of fraudulent robocalls, or as having transmitted fraudulent robocalls, a demand for an explanation and verification of mitigation of the traffic is issued to the customer. If the fraudulent traffic is not remediated, GE through our upstream providers immediately begins rejecting all traffic from the offending customer.

Telephone Numbers

A Telephone Number ("TN") based caller identity is the originating phone number included in call signaling used to identify the caller for screening purposes that is uniquely associated with the subscriber. As a long-distance reseller, GE does not participate in issuing or monitoring telephone numbers.

Ongoing Robocall Mitigation

As part of our Plan to mitigate and prevent any originating robocalls, we are committed to early identification and investigation of possible robocalling conditions. Among other things, we watch for higher-than-normal subscriber traffic volume, including large bursts of traffic in small timeframes or spikes in usage.

GE Contact for Robocall Mitigation-Related Issues

The Company will update our Robocall Mitigation filings within 10 business days of any change to the information outlined in this plan. Please direct any questions related to Robocall Mitigation issues to:
