Know Your Customer

One Data, Inc. follows the best practices for vetting caller identity as described by the NANC Call Authentication Trust Anchor Working Group (<https://docs.fcc.gov/public/attachments/DOC-367133A1.pdf>). All new and existing customers are subject to a verification process to prevent the origination of unlawful robocall traffic on our platform.

Traceback

Although we have not yet received any requests, One Data certifies that it will respond fully and within 24 hours to all traceback requests from the FCC, law enforcement, and the Industry Traceback Group (ITG), and will cooperate in investigating and stopping any illegal robocallers that attempt to use our services.

Robocall Mitigation Program

One Data currently operates as an Internet Protocol Enabled Services (IPES) provider, offering a CRM platform with integrated WebRTC-based calling. Our solution is still in beta, and we are committed to full STIR/SHAKEN compliance.

We have already obtained an FRN and 499 ID, and our Operating Company Number (OCN) application is pending with NECA. Following OCN approval, we will complete onboarding with the STI-PA and STI-CA. We have already finalized an agreement with Sansay and will implement in full a STIR/SHAKEN signing service for our outbound calls.

We fully understand that we are subject to robocall mitigation procedures consistent with 47 CFR § 64.6305(a), including monitoring and immediate investigation of any suspicious traffic.

We intend to update our Robocall Mitigation Database certification to **Complete Implementation** once our onboarding with the STI-PA/CA is finalized and we are signing calls directly with our own certificate.
