CERTIFICATION OF ROBOCALL MITIGATION COMPLIANCE

AmeriMex Communications Corp dba SafetyNet Wireless ("SafetyNet") hereby submits this Robocall Mitigation Certification pursuant to the requirements of 47 C.F.R. § 64.6305(b), in support of its listing in the Federal Communications Commission's (FCC) Robocall Mitigation Database.

I. COMPANY OVERVIEW

SafetyNet is a wireless reseller providing service under the Lifeline Program and other offerings. SafetyNet does not operate its own switching equipment or routing infrastructure and therefore does not originate, transport, or terminate calls using its own facilities. All telecommunications services provided to SafetyNet's customers are delivered entirely through its underlying carriers, **T-Mobile USA, Inc.** and **AT&T Mobility LLC**.

II. ROBOCALL MITIGATION STRATEGY

As a non-facilities-based reseller, SafetyNet **relies exclusively** on its underlying carriers, T-Mobile and AT&T, to implement all robocall mitigation measures, including but not limited to:

- **STIR/SHAKEN compliance** for authenticated caller identification;
- **Call analytics and blocking tools** to detect and prevent illegal robocalls;
- **Traceback cooperation** with the Industry Traceback Group (ITG), FCC, and law enforcement agencies.

SafetyNet does not have the technical capability or legal authority to implement robocall mitigation tools independently.

III. TRACEBACK COOPERATION

SafetyNet **fully cooperates** with traceback requests within 24 hours by responding and promptly forwarding any such requests received from the Commission, law enforcement, or the industry traceback consortium to its underlying carriers. SafetyNet ensures that its agreements with upstream providers require adherence to FCC traceback and mitigation protocols.

IV. KNOW YOUR PROVIDER COMPLIANCE

SafetyNet has service agreements in place through which it resales the service of its underlying providers, T-Mobile and AT&T, both of which have filed their own Robocall Mitigation Certifications with the FCC and are responsible for complying with all robocall mitigation rules for traffic carried over their networks.

V. STIR/SHAKEN COMPLIANCE

SafetyNet does not directly implement STIR/SHAKEN protocols, as it does not originate calls on IP networks under its own facilities. This functionality is provided by its underlying carriers in compliance with FCC regulations.

VI. CERTIFICATION

To the best of its knowledge, SafetyNet has no history of enabling or failing to prevent illegal robocalls and has policies in place to ensure compliance with applicable regulations.

Certified by,

A handwritten signature in blue ink that reads "Nick Metherd".
