

Amir Solutions ROBOCALL MITIGATION PROGRAM

Below is the Robocall Mitigation Plan filing for Amir Solutions. This plan will be submitted to the FCC's Robocall Mitigation Database and will be adapted to adjust to the latest laws, regulations, and industry best practices.

Monitoring

Amir Solutions only deal with Call centre who do not use dialer for traffic we only use service with manual dialing with correct display as we have option in X-lite softphone which we use for calling.

Amir Solutions has monitoring and reporting systems in place to analyze high-volume voice network traffic to identify and monitor patterns consistent with robocalls. Our monitoring systems provide alerts on calling patterns with unusual spikes, traffic patterns, or attempted use of non-validated Telephone Number (TN) to detect patterns consistent with illegal robocalls.

If Amir Solutions detects a pattern consistent with illegal robocalls, or we have reason to suspect illegal robocalling is taking place over our network, we will seek to identify the party that is using our network to originate, route, or terminate these calls. and take appropriate action.

Appropriate action may include:

- Validating that the originating party is authorized to use the TN.
- Suspending calling party's ability to originate, route, or terminate calls on Amir Solutions network.

Traceback Cooperation

Amir Solutions commits to responding in a timely manner and supporting all traceback requests from the FCC, law enforcement, and the [Industry Traceback Group \(ITG\)](#).

Robocall Mitigation Solution Overview
