

2026 Robocall Mitigation Database Filing

Company Legal Name: KINS247 LLC

FRN: 0034541862

OCN: 882K

Service Classification: Non-Gateway Intermediate Provider

Company Overview

KINS247 LLC is a U.S.-based VoIP carrier that provides wholesale voice routing services. The company transmits voice traffic between telecommunications providers but does not originate calls from end users and does not function as an international gateway provider introducing foreign traffic directly into the United States network.

The company operates in compliance with rules adopted by the **Federal Communications Commission** and maintains a robocall mitigation program designed to detect, prevent, and address illegal robocalls transmitted over its network.

STIR/SHAKEN Implementation

KINS247 LLC has fully implemented the **STIR/SHAKEN** caller ID authentication framework within the IP portions of its network.

The company's implementation includes:

- Verification of incoming authenticated calls
- Preservation and transmission of authentication information when routing calls
- Secure management of STI certificates issued by authorized certification authorities
- Ongoing monitoring to ensure compliance with authentication requirements

Where technically feasible, authenticated call information is passed through the network consistent with industry standards.

Role as a Non-Gateway Intermediate Provider

As an intermediate provider, the company transmits calls between originating and terminating providers.

The company does not:

- Originate calls from retail subscribers
- Assign telephone numbers to end users
- Introduce foreign-originated traffic directly into the U.S. PSTN as a gateway provider

However, the company maintains procedures designed to ensure that illegal robocalls are not knowingly transmitted across its network.

Robocall Mitigation Practices

The company has implemented reasonable and effective measures to identify and mitigate illegal robocall traffic.

These practices include:

Traffic Monitoring

Network traffic is monitored using automated tools and operational review processes designed to identify suspicious patterns such as:

- Extremely short call durations
- Abnormally high call volumes
- Sequential dialing patterns
- Unallocated or invalid telephone numbers
- Sudden spikes in call activity

Analytics and Alerts

Traffic analytics systems generate alerts when patterns associated with robocalls are detected. These alerts are reviewed by network operations and compliance personnel.

Upstream Provider Management

The company performs due diligence before establishing routing relationships with upstream providers.

Procedures include:

- Verification of provider identity
- Confirmation of presence in the FCC Robocall Mitigation Database when applicable
- Contractual requirements prohibiting illegal robocalling
- Ongoing monitoring of traffic quality and behavior.

Providers associated with suspicious traffic may be subject to investigation or termination.

Response to Suspected Illegal Robocalls

If traffic transmitted over the company network is determined to be associated with illegal robocalling, the company may take mitigation actions including:

- Blocking specific numbers
- Blocking routes
- Suspending trunks
- Contacting upstream providers for investigation
- Terminating service agreements when necessary.

All actions are documented internally.

Traceback Cooperation

The company cooperates with traceback investigations coordinated by the **USTelecom Industry Traceback Group** and other authorized entities.

The company responds to traceback requests within required timeframes and works to identify the upstream source of suspicious traffic.

Corrective actions are taken where appropriate.

Recordkeeping

The company maintains records relevant to robocall mitigation activities, including:

- Traffic monitoring reports
- Traceback responses

- Provider onboarding documentation
- Mitigation actions taken

Records are retained consistent with regulatory expectations.

Compliance Oversight

The robocall mitigation program is overseen by the company's compliance and network operations teams.

These teams are responsible for:

- Monitoring traffic
- Responding to traceback requests
- Enforcing mitigation policies
- Updating procedures as regulatory requirements evolve.

The program is reviewed periodically to ensure continued compliance with requirements established by the **Federal Communications Commission**.

Certification

KINS247 LLC certifies that:

- It has fully implemented the **STIR/SHAKEN** caller ID authentication framework where required.
- It maintains a robocall mitigation program reasonably designed to prevent illegal robocalls from being transmitted over its network.
- The information contained in this filing is true and accurate to the best of the company's knowledge.
