

Robocall Mitigation Plan for WebFindYou and Its Customers

WebFindYou provides Digital Marketing Technology and a key component of our technology is call tracking and SMS. In addition, in the future, we will be offering the ability to make and receive phone calls via our technology. We do not provide, nor will we provide, an automated means of power-dialers, nor will we allow phone number spoofing. All our business customers must agree to our terms and conditions of our software to be a customer. Our software is not modifiable by our customers, and therefore the stringent guidelines we have in place are always enforced.

Furthermore, we use [Bandwidth.com](https://bandwidth.com) as our underlying carrier partner for both voice and SMS and they sign calls on our behalf using their robocall mitigation plan which includes prevention, detection, and mitigation.

We are also well-equipped to quickly respond to any concerns, issues, or new mandates as put forth by the FCC or [Bandwidth.com](https://bandwidth.com) to always remain in compliance.
