

IMAGEZE INC.

Robocall Mitigation Plan

February 25, 2026

ImagEze Inc.
320 Penn Avenue, West Reading, PA 19611

Introduction

This document outlines the steps and actions taken by ImagEze Inc. to mitigate and eliminate illegal robocalling. ImagEze Inc. has an ongoing commitment to scan for and help to alleviate illegal robocalling by pre-qualifying prospective customers, monitoring existing customers for traffic patterns indicative of prohibited robocalls, and working with other providers and regulatory agencies in combating fraudulent voice activity.

ImagEze Inc. provides resold Voice over Internet Protocol (“VoIP”) calling services. All telecom services are provided solely on a resale basis. As a telecom reseller, ImagEze Inc. is dependent on our underlying provider’s assistance with monitoring networks for fraudulent voice calling patterns. Our underlying provider for VoIP is White Label Communications, LLC.

Knowing Your Underlying Provider

ImagEze Inc. has a master service agreement with White Label Communications, LLC and has received written assurances from their officials that it has and will continue to sign calls submitted to ImagEze Inc. and will abide by the FCC’s STIR/SHAKEN and robocall mitigation rules in all respects when providing voice services to ImagEze Inc. ImagEze Inc. and its upstream providers have agreed to work together diligently to mitigate all illegal robocalls, including cooperating fully when receiving traceback requests.

Know Your Customer

For new clients, screening interviews are performed to understand potential customer business models and the potential, or lack thereof, for involvement in fraudulent robocalling schemes. All present VoIP subscribers are also current IT clients whose entire IT network is managed by ImagEze Inc., so we already have a close relationship with our current VoIP clients.

In our research of prospective subscribers, ImagEze Inc does not activate prospects that provide anonymous information or where data mismatches are found. Additionally, prospects are required to agree to ImagEze Inc.’s strict policies and contractual terms prohibiting the act of fraudulent voice activity as a condition of doing business with ImagEze Inc.

Individuals associated with prospects or current customers who have been known to act improperly or otherwise be involved in fraudulent robocalling will cause their companies to be rejected by ImagEze Inc. as a customer and any existing customer relationships could potentially be severed.

Traceback Requests

ImagEze Inc. is committed and will respond fully within 24 hours to all Traceback Requests from the FCC, law enforcement agencies, and the industry traceback consortium and vows to cooperate with these agencies in investigating and stopping any illegal robocallers that use our service to make calls. ImagEze Inc. will devote sufficient resources to provide prompt and complete information to traceback requests. Our points of contact to handle all traceback requests are:

Travis Jack
610-628-3676, Ext 101
Tjack@watchkeep.com

Upon contact, we will run reports back through the White Label VoIP portal to attain the needed information.

If a traceback exposes an existing customer as the source of fraudulent robocalls, or as having transmitted fraudulent robocalls, a demand for an explanation and verification of the mitigation of the traffic issued to the customer. If the fraudulent traffic is not remedied, ImagEze Inc. immediately begins rejecting all traffic from the offending customer.

Telephone Numbers

A telephone number based caller identity is the originating phone number included in our signaling used to identify the caller for screening purposes that is uniquely associated with the subscriber. A subscriber is permitted to use a telephone number as a caller identity if a telephone number is directly managed by ImagEze Inc. and/or obtained by ImagEze Inc. from our underlying carrier for use by the subscriber.

For subscribers with multi-line telephone systems, ImagEze Inc. and our underlying provider only allow calls to be connected if the originating number matches one of the telephone numbers assigned to the subscriber. This screening capability enables an automated and secure method of validating originating telephone numbers.

International Calling

ImagEze Inc. is not currently an international voice services provider. If at any time ImagEze Inc. does decide to sell our services to international customers using North American Numbering Plan resources, we will familiarize ourselves with and develop best practices for full vetting of such customers and work with our underlying provider to perform the necessary telephone number validation on all international originated calls.

Call Analytics

ImagEze Inc. must rely on our underlying provider and/or their third-party vendors to determine if originating calls should be blocked based on call analytics practices. We have control of starting and stopping VoIP service, so if we discovered that we needed to legally terminate service, we could do so immediately.

Ongoing Robocall Mitigation

ImagEze Inc. monitors and examines call detail records (CDRs) on a recurring basis to detect suspicious call activity and/or calling patterns. When we and/or our underlying provider detect network usage patterns consistent with illegal robocalls or suspect illegal robocalling is taking place, we will immediately seek to identify the party that is originating, terminating, or routing these calls so that we may take appropriate action. The actions taken may include, but are not limited to ImagEze Inc. and/or our underlying provider initiating a traceback investigation; verifying that the originating customer owns or is authorized to use the Caller ID number, determining whether the Caller ID name sent to a receiving party matches the customer's corporate and/or d/b/a name; block the party's ability to originate, terminate, or route calls on the network; and/or providing notice to law enforcement authorities.

As part of our plan to mitigate and prevent any originating robocalls, we are committed to early identification and investigation of possible robocalling conditions. Among other things, we watch for higher than normal subscriber traffic volume, including large bursts of traffic in small timeframes or spikes in usage. We also monitor for originating calls of short duration and low call completion percentages, originating calls with sequential called to number dialing patterns.
