To whom it may concern

T4Com Robocall Mitigation

Reference 47 CFR 64.64305 (Apr.17.2024)

T4Com asserts that it completes verification on all calls and the CLI's presented in them when the call is originated. We deploy Database driven call data analysis linked to individual customers' SIP identities. Output of the analysis is alerted via our core monitoring and reporting system.

CLIs presented by customers are provided by T4Com. Each customer's service contract specifically forbids any kind of illegal use and misrepresentation of calling line information. Where it is found a call is not compliant with our policies service to that customer is suspended.

T4Com is a foreign voice service provider and therefore we have not implemented STIR/SHAKEN

We closely engage with other carriers and networks to restrict and remove troublesome automated diallers.

T4Com will act quickly in the event of any reports of non-compliant activity sourced from our network and hereby commits to respond fully within 24 hours to all traceback requests from the FCC, law enforcement and the industry traceback consortium.
