

All The Right Tech LLC Robocall Mitigation Plan

This Robocall Mitigation Plan is submitted by All The Right Tech LLC. pursuant to the provisions of 47 C.F.R. § 64.6305, adopted by the Federal Communications Commission (FCC) which require all “voice service providers” to establish a “robocall mitigation plan”. This document sets forth the Provider’s current policies and procedures designed to reduce or eliminate outbound illegal robocalls originating on its network. The Provider views these policies and procedures as constituting “reasonable steps” to avoid the origination of illegal robocalls on its network and in addition to following these steps the Provider commits to responding to all traceback requests from the FCC, law enforcement, and the Industry Traceback Group (ITG), and to cooperate with such entities in investigating and stopping any illegal robocallers that may use its service to originate calls.

I. STIR-SHAKEN IMPLEMENTATION STATUS

As indicated in the FCC’s Robocall Mitigation Database, the Provider’s status with respect to STIR-SHAKEN implementation is as follows:

- The filer certifies that all of the calls that it carries or processes on its network are subject to a robocall mitigation program consistent with 47 CFR § 64.6305(c), which shall include reasonable steps to avoid carrying or processing illegal robocall traffic and shall include a commitment to respond fully and within 24 hours to all traceback requests from the Commission, law enforcement, and the industry traceback consortium, and to cooperate with such entities in investigating and stopping any illegal robocallers that use its service to carry or process calls. The filer also certifies that any prior certification has not been removed by Commission action and it has not been prohibited from filing in the Robocall Mitigation Database by the Commission, and that it has fully implemented the STIR/SHAKEN authentication framework across its entire network and all calls it carries or processes are compliant with 47 CFR § 64.6302(c).

II. TRACEBACK REQUESTS

As noted above, the Provider will cooperate with the FCC, law enforcement and the (ITG) on all traceback requests and investigations. To allow for timely and comprehensive law enforcement response efforts against illegal robocallers, the Provider will dedicate sufficient resources to promptly complete and provide responses to all traceback requests received from the FCC, law enforcement and/or the ITG, and commits to fully responding to any traceback

request received within 24 hours after receiving the same.

III. CUSTOMER VETTING PRACTICES

As a means of preventing or minimizing the origination of illegal robocalls through its voice services, the Provider will use best practices in vetting the identity of all of its voice service subscribers, whether a residential or business/commercial subscriber (including any entities that are purchasing the Provider's services for resale). The subscriber vetting process is intended to help determine the legitimacy of a customer for the purpose of establishing a service relationship. Generally, the Provider looks to confirm the identify of customers using its voice services through collecting information such as physical customer location, contact person(s), state or country of incorporation, federal tax ID, and the nature of the customer's business. Provider efforts to vet retail and business/commercial subscribers occurs during the process of provisioning customer requested services (for example in appropriately sizing the facilities to their claimed intended use), executing the Provider's required service agreements, and granting the customer the right to use telephone number resources. Commercial end users, comprised of larger businesses with more complex service configurations, are generally recognized as presenting a higher risk of perpetrating illegal robocalls and thus those customers, at the Provider's discretion, may be subject to an additional review, including a more stringent background check and possibly a site visit.

IV. TELEPHONE NUMBER VALIDATION PRACTICES

Telephone Number Validation refers to the confirmation of the customer or end-user right to use a telephone number in connection with their subscribed voice service(s). In accord with industry best practices, the Provider has procedures in place to confirm the calling customer's right to use a telephone number. Specifically, a subscriber of the Provider's services is permitted to use a telephone number as their caller identity if a number is directly managed by the Provider and/or obtained by the Provider via an underlying partner. Further, for: (1) single line voice service subscribers, both services connected via TDM or IP, the switching equipment has been set up to only accept calls from the number assigned to that subscriber; and (2) subscribers with multi-line telephone systems, for both services connected via TDM or IP, the Provider screens all originating calls and only allows calls to be connected if the originating number matches one of the numbers assigned to the subscriber. These screening capabilities enable an automated and secure method of validating originating telephone numbers.

V. INTERNATIONAL CALL ORIGINATORS

The Provider is not currently an international voice services provider. If at any time the Provider does sell its services to customers which are international call originators using North American Numbering Plan resources it will familiarize itself with and develop best practices for fully vetting such customers and performing telephone number validation on all international originated calls.

VI. KNOW YOUR UPSTREAM PROVIDER PROCEDURES

The Provider has longstanding relationship with the upstream provider and maintains its awareness of the nature of their businesses and the legitimacy of their call transmission services. Further, the Provider, in the interest of providing the highest quality services to all of its voice service customers, is committed to taking those steps necessary to ensure that any upstream providers providing connectivity are equally committed to monitoring their networks and preventing their use for the transmission of illegal robocalls. This includes the use of robocall prevention language in any contracts that the Provider may directly have with any upstream provider entities.

VII. ONGOING ROBOCALL MITIGATION PRACTICES

The Provider monitors the usage of its network and examines call detail records (CDRs) on a recurring basis for the purpose of detecting suspicious call activity and/or calling patterns. When network usage patterns consistent with illegal robocalls are detected or the Provider otherwise suspects illegal robocalling or spoofing is taking place on its network, it immediately seeks to identify the party that is originating, terminating, or routing these calls so that it may take appropriate action. The actions taken may include, but are not limited to: initiating a traceback investigation; verifying that the originating customer owns or is authorized to use the Caller ID number; determining whether the Caller ID name sent to a receiving party matches the customer's corporate name, trademark, or d/b/a name; terminating the party's ability to originate, terminate, or route calls on the Provider's network; and providing notice to law enforcement authorities.

As part of its Plan to mitigate and prevent any originating robocalls on its network, the Provider is committed to early identification and investigation of possible robocalling situations. In monitoring usage of its network, particular attention is given to: (1) higher than normal subscriber traffic volume including large bursts of traffic in small timeframes or inconsistent volumes of traffic (spikes in usage); (2) originating calls of short duration and low call completion percentages; (3) originating calls with sequential called to number dialing patterns; (4) repeated calls made to do-not-call registry or invalid numbers; and (5) calls to NPA-NXXs not assigned by the North American Numbering Plan Administrator.
